

Greater flexibility for your lighting

VARIO SET - Easily adjust the light output using the light switch

VARIO SET – MAXIMUM FLEXIBILITY

Further
information:

VARIO SET

Unlike VARIO, where the luminous flux is adjusted via DIP switches in each luminaire, with VARIO SET the luminous flux can be adjusted quickly and easily via the light switch or contactor – without any problems for all luminaires in a switched lighting group.

As indicated by the abbreviation VARST in the model code, the VARIO SET range currently includes the following series and will be expanded as required: **PRIMO XR, TUBEO, PROXIMA and LUXANO 2.**

- ✓ Adjustment via the light switch or contactor
- ✓ Without opening the light fitting
- ✓ Synchronous luminous flux adjustment
- ✓ Can be changed at any time afterwards
- ✓ Five defined luminous flux levels
- ✓ No app or accessories required

Tutorial video

Turning the lights on and off three times activates the light output adjustment mode, in which you can choose between five defined light output levels. The setting is saved by switching the lights off once the requested brightness is reached.

...with passion for excellent lighting – since 1895!
